So frustrating! This is a hard class and the textbook itself doesn't do a good job of explaining things. I got the solutions manual in hopes of helping me with homework problems and guess what? NOT ALL OF THE PROBLEMS ARE IN THE SOLUTIONS MANUAL! Yeah, especially the hard ones. Very frustrating. Better yet, the problems it does show how to do...well, it doesn't really show how to do. It picks up somewhere in the middle of the answer and summarizes how to finish it. Again, very frustrating. I got this book needing help on problems, and I am really not getting that. :/

This manual was suggested by the math course I was taking and it does not provide solutions to every question. In fact, it often skips the most challenging questions in the textbook. The explanations are not clear and instead of writing out equations sometimes the authors will write a paragraph instead. Would not recomend.

Waste of money. I would totally avoid it at all costs. The manual only covers maybe 25% of all the problems and the ones it does cover, it does terrible job of explaining. I would just spend a bit extra and get chegg for homework help.

WARNING: don't buy this! its a waste and isn't even helpful. There are only a few problems per chapter and it doesn't even explain how to do the problems.

Not very helpful. Only supplies a few solutions, and most of the explanations are borderline useless. Every once in a while there is a good solution guide to a problem, but not very often.

Most of the solutions are absent and the ones left are very curtailed. You might as well use the answers at the back of the textbook.

Did not provide answers for all exercises. The answers that did appear in the book were, however, very well explained.

Didn't have most solved math problems I needed
