THIRD Section of this eBook (Problems #360 thru #500) Problems #360 to #500 are ã ¨ “advanced” ã ¨ TACHS Math problems for eighth graders and test-takers performing at the highest proficiency levels. These problems provide over a hundred opportunities to challenge applicants to reach the highest TACHS scaled score ranges preferred at New York ã ¨ ‘s top Catholic high schools.. What is the purpose of these 500 TACHS Mathematics practice problems? A pervasive characteristic of the TACHS private school admission exam is that it is challenging, oftentimes featuring test questions at or above your child ã ¨ ‘s current public or private school curriculum. The TACHS targets a small, competitive group of students applying for Catholic high schools in and around New York City.. Using our years of experience developing training guides for a national test preparation company, we have created TACHS study materials that closely approximate the sequence, scope, phrasing and difficulty level of actual exams. We have accomplished this through years of meticulous research into individual TACHS test questions and through information acquired from former test participants. Thousands of applicants have worked through the TACHS Mathematics practice problems contained within this

Kindle eBook to enhance their candidacies in the private school admission process..Parents should not overreact to “lower-than-expected” results. (Easy for us to say!) In addition to TACHS scores, most Catholic schools take into account academic performance, teacher / counselor / coach recommendations, extracurricular activities and the personal interview / essay / portfolio in their admissions decision. But, of course, high TACHS scores help immensely. Remember that every child can improve his or her TACHS performance with the right mix of effort, instruction, materials, experience and encouragement!.TACHS MATH TestThe Math test covers the broad skills of concepts, estimation, problem solving, and data interpretation. It tests your math knowledge and ability to solve math problems using information from stories, graphs, and tables. You are asked to estimate answers to math problems as well as to compute answers.
