# Addiction For Nurses

## **Synopsis**

Nurses are acknowledged as key agents in addressing alcohol and drug misuse at individual, family, and community levels. Addiction nursing is central to the assessment, management, and care of people with problematic use of psychoactive substances (both legal and illegal). Work takes place in a wide range of settings, from traditional hospital clinics and wards to community locations such as police custody suites and needle exchange facilities. *Addiction for Nurses* is a comprehensive textbook for students, explaining the role of the nurse at each stage of intervention. Early chapters approach the subject from sociological, historical, and cultural perspectives, covering significant topics such as the nature of addiction, its social context, and addiction theory. The book then presents vital information about each of the main areas of addiction (nicotine, alcohol, opiates, cannabis, psychostimulants, and hallucinogens) with clinical and practical guidance on recognition, assessment, and treatment intervention strategies. Further chapters consider dealing with emergencies, blood-borne viruses, harm reduction, and work with specific client groups (for instance, black and ethnic minority communities, or those with special needs). This book is an essential resource for all those who come into contact with alcohol and drug misusers and for specialist addiction nurses preparing for practice in this complex and rewarding field.

## **Book Information**

Paperback: 232 pages

Publisher: Wiley-Blackwell; 1 edition (November 8, 2010)

Language: English

ISBN-10: 1405187468

ISBN-13: 978-1405187466

Product Dimensions: 6.9 x 0.6 x 9.7 inches

Shipping Weight: 14.1 ounces

## **Customer Reviews**

"In this textbook for students, Rassool (addiction and mental health, U. de São Paulo and

Federal U. of Minas Gerais, Brazil) describes the role of nurses at each stage of intervention when working with individuals with addictions. He discusses the nature of addiction, its social context, causes, and models of care and change, then addictions to nicotine, alcohol, and various drugs, and recognition, assessment, and treatment strategies. Other chapters cover dealing with emergencies, blood-borne viruses, harm reduction, and working with populations like minorities and those with special needs." (Book News Inc., February 2011)

Addiction for Nurses is a comprehensive textbook for students, explaining the role of the nurse at each stage of intervention. Early chapters approach the subject from sociological, historical, and cultural perspectives, covering significant topics such as the nature of addiction, its social context, and addiction theory. The book then presents vital information about each of the main areas of addiction (nicotine, alcohol, opiates, cannabis, psychostimulants, and hallucinogens), with clinical and practical guidance on recognition, assessment, and treatment intervention strategies

Addiction for Nurses seems to me a very good overview of the current (published 2010) trends in thinking about addiction in the health care field. The author is from the UK, so some of the comments he makes about professional opportunities for nurses in the field of addiction don't apply, but his foreign status also gives his writing a wider perspective. The book has chapters that can be used like a workbook to challenge the reader's assumptions about addiction and addicts. And it presents information on professional matters as well as outlining current interventional strategies for a variety of substances and summarizing the research on the effectiveness of these strategies.
