Customer Reviews

"This book ends in a question that is not only puzzling for you and your child but for scientists also. How do particles decide their color/colour? Giving your child unanswered scientific questions may be the beginning of a new generation of scientists determined to find their answers. This is a must have book in your collection." - The Baby Spot

Chris Ferrie is an award-winning physicist and is the senior lecturer for Quantum Software and Information at the University of Technology Sydney. He has a Masters in Applied Mathematics, BMath in Mathematical Physics and a PhD in Applied Mathematics. He lives in Australia with his wife and children.

Not as good as some of the others. I bought Introductory Calculus for Infants, and it was adorable. I'm sure my engineer son will get a kick out of it as he awaits his firstborn. This one is much much shorter, and does not make a whole lot of sense.

The illustrations were a bit plain, even for baby book standards, and we felt the author could have done a better job at explaining this theory. We did like it a little better than the Quantum Physics for babies book though. Even so, we didn't feel it was worth the money and sent it back.

This series of books is fantastic! They're basic. They're accurate. They're fun.

My son and daughter love this series and so do I.

great for kids 6 to 7 years of age... perfect for fluency reader (toddlers)

I may be an adult but I thoroughly enjoyed this book. It gave the difficult concept in quantum mechanics of entanglement, an easy explanation. I wish my college professor had been as clear.

They are quick reads but adding a bit of imagination and storytelling is highly recommended.

I'm sure this book will be the perfect baby shower gift for the young couple I'm giving it to. They are doing the babies room in educational design projects.
