# The Future Of Architecture In 100 Buildings (TED Books)

## Synopsis

The founder of Architizer.com and practicing architect draws on his unique position at the crossroads of architecture and social media to highlight 100 important buildings that embody the future of architecture. We're asking more of architecture than ever before; the response will define our future. A pavilion made from paper. A building that eats smog. An inflatable concert hall. A research lab that can walk through snow. We're entering a new age in architecture—one where we expect our buildings to deliver far more than just shelter. We want buildings that inspire us while helping the environment; buildings that delight our senses while serving the needs of a community; buildings made possible both by new technology and repurposed materials. Like an architectural cabinet of wonders, this book collects the most innovative buildings of today and tomorrow. The buildings hail from all seven continents (to say nothing of other planets), offering a truly global perspective on what lies ahead. Each page captures the soaring confidence, the thoughtful intelligence, the space-age wonder, and at times the sheer whimsy of the world's most inspired buildings—and the questions they provoke: Can a building breathe? Can a skyscraper be built in a day? Can we 3D-print a house? Can we live on the moon? Filled with gorgeous imagery and witty insight, this book is an essential and delightful guide to the future being built around us—a future that matters more, and to more of us, than ever.

## Book Information

Series: TED Books

Hardcover: 176 pages

Publisher: Simon & Schuster/ TED (March 10, 2015)

Language: English

ISBN-10: 1476784922

ISBN-13: 978-1476784922

Product Dimensions: 5 x 0.7 x 7 inches

Shipping Weight: 12 ounces (View shipping rates and policies)

Average Customer Review: 4.1 out of 5 stars 52 customer reviews

## Customer Reviews

Marc Kushner is a practicing architect who splits his time between designing buildings at HWKN, the

architecture firm he cofounded, and amassing the world's architecture on the website he runs, Architizer.com. Both have the same mission: to reconnect the public with architecture. Kushner's core belief is that architecture touches everyone and everyone is a fan of architecture—even if they don't know it yet. New forms of media empower people to shape the built environment, and that means better buildings that make better cities that make a better world.

**The Future of Architecture in 100 Buildings** 2> This book wants you to ask more from architecture. You live in a house, you work in an office, you send your kids to a school. These places aren't just the backdrop to your life, they shape your life—they define who you see, what you see, and how you see it. Architecture impacts how you feel every day, which isn't surprising considering how much time we all spend inside buildings. The average American, for example, spends 90 percent of their time indoors, yet so many of our buildings leave us without natural light, shelter us with low ceilings, and ignore our personal, social, and environmental needs. It doesn't have to be like this. We can control this powerful force—we just have to start asking more from our buildings. This architectural revolution is already upon us. The average person is more comfortable having an opinion about architecture today than ever before, mostly due to the dialogue enabled by social media. The world's 1.75 billion smartphones are fundamentally changing the way architecture is consumed, turning everyone into an architectural photographer. Photographs shared on social media liberate buildings from their geographic locations, enabling a new level of public engagement. We experience architecture today with an unprecedented immediacy, creating fodder for a global conversation about buildings and their impact. This communications revolution is making us all comfortable critiquing the built environment around us, even if that criticism is just “OMG I luv this!” or “This place gives me the creeps.” This feedback is removing architecture from the exclusive purview of experts and critics and putting power into the hands of the people who matter: everyday users. We have started “liking” and “hating” places out loud. Architects can hear us in real time, which has empowered (and sometimes even forced) them to pursue new ideas—to create solutions that respond to today's most pressing social and environmental issues. In this new world, one in which people are asking more from their buildings, architects are no longer bound by any single style at any single time. People don't want their town library in Seattle to look the same as their grandmother's library in New Jersey. Even architectural historians don't know exactly what is going on right now because everything is changing so fast. In

fact, they will never know what is going on again, because the future of architecture is a frenetic whirlwind of experimentation and a reevaluation of long-accepted habits. This book considers the public to be a partner in architecture. The questions we can ask of buildings, and of architects, will create a new future – one that will look a lot different than the world we know today. Some of the questions this book poses may seem silly: What if a cow built your house? Can we swim in poop? Can we live on the moon? But two hundred years ago it was wild to ask, Will I live in the sky? Or, Will I need a sweater in the summer? Now that elevators and air conditioning enable us to live in the clouds and freeze in a heat wave, we must ask harder, more imaginative questions. Architects have the know-how to design buildings that are greener, smarter, and friendlier – and now the public is a partner in this ambition. In one hundred examples, this book is a primer on how you and I and the entire world can ask for good architecture.

This is a wonderful collection of a wide range of unusual architectural ideas, from simple metal pods in South Africa to an extravagant wave hotel in Chicago. It includes buildings made from conventional materials that were used in unusual ways to dwellings created by silkworms that could inspire future architecture. The book is meant to spark interest, not to provide detail about the buildings and their construction. As such I like it very much.

very nicely done ... gift for grandson with an interest in architecture ... photos and descriptions are not too much for 11 year old to appreciate This is a nice adult coffee table book or an inspiration for future architects.

got this for my son as he is considering becoming an architect in the future. It has a lot of new ideas we have not yet seen.

Great book , it was a gift for my son who study his third year at the School of Achitecture of the University of Puerto Rico. There he had visited as part of the summer program: Peru, Paris, Barcelona & Londres. I recomend the book.

as promised.

Great book though I would have liked to see more written about each building.

The book is what I was looking for. It gives a glimpse into the cutting edge of today's and tomorrow's architecture. Some of the structures are beautiful and some are odd, but all of them are interesting.

My son writes: I am 11 years old and I want to be an architect when I grow up. This book was very interesting and hard to put down. There were great pictures, too.
