Joan L. Slonczewski received her BA from Bryn Mawr College and her PhD in molecular biophysics and biochemistry from Yale University, where she studied bacterial motility with Robert M. Macnab. After postdoctoral work at the University of Pennsylvania, she has since taught undergraduate microbiology in the Department of Biology at Kenyon College, where she earned a Silver Medal in the National Professor of the Year program of the Council for the Advancement and Support of Education. She has published numerous research articles with undergraduate coauthors on bacterial pH regulation and has published six science fiction novels, including *A Door into Ocean* and *The Highest Frontier*, both of which earned the John W. Campbell Memorial Award. She served as At-Large Member representing Divisions on the Council Policy Committee of the American Society for Microbiology and as a member of the editorial board of the journal *Applied and Environmental Microbiology*. John W. Foster received his BS from the Philadelphia College of Pharmacy and Science (now the University of the Sciences in Philadelphia) and his PhD from

Hahnemann University (now Drexel University School of Medicine), also in Philadelphia, where he worked with Albert G. Moat. After postdoctoral work at Georgetown University, he joined the Marshall University School of Medicine in West Virginia. He is currently teaching in the Department of Microbiology and Immunology at the University of South Alabama College of Medicine in Mobile, Alabama. Dr. Foster has coauthored three editions of the textbook *Microbial Physiology* and has published more than 100 journal articles describing the physiology and genetics of microbial stress responses. He has served as Chair of the Microbial Physiology and Metabolism division of the American Society for Microbiology and as a member of the editorial advisory board of the journal *Molecular Microbiology*.

I ordered this textbook as "Condition: Used - Very Good". That description does not come close to the book that I received. Upon opening the package it was very apparent that this text book was, at best, in poor condition. The spine of the book has a 5in cut traveling along the length of the spine and it is deep enough to go entirely through the spine. Both the upper and lower portions of the spine are badly worn with the upper being held together by masking tape and the lower has a large flap hanging off. The back cover also has a tear leaving yet another flap hanging off. If I were selling this book, I could not in good conscious, label it's condition as anything above good. I would love to hear what criteria you used when creating this condition label.

I will never rent a book online again after this. When I opened the package the book was in terrible condition. The book was obviously water damaged, given that the pages were stuck shut together and wrinkled. There was also mold throughout the book and the books binding was awful as well. No I need to figure out how to return it because the book is not useable.

Rental arrived promptly and in excellent condition. The book itself is thorough and well-organized, with plenty of supporting examples, both in text and images, to make sense of the wide range of topics.

Solid book and way better than any Pearson book. You are in luck if your professor asks for this book as a course material

i passed.

Missing page, from book, studying for test

This book can be a little dense and excessively wordy, and it doesn't delve as deeply into the medical implications as much as I would've hoped. However, as an alternative to the required text book for the school, it's great. (Because it's so much cheaper!) You should probably know that although it's a soft cover, it's not got holes to be able to put it in a three binder like some other soft cover books. Also, it's the international student edition, so trying to sell back to the school will probably not be a success. Still, you can always just sell it back to !

Great book.
