Hausman is Professor in the Department of Biology at Boston University, USA. His research is focused on understanding how interactions between cells and between cells and the extracellular matrix affect differentiation and morphogenesis.

Great diagrams and easy to follow explanations of the cell.

Best cell biology book I've ever read, and I've used a couple. Easier to read than most, which is nice, considering I'm using it for medical school and have too much to read anyway.

I'm happy that I can get this book to rent. and I recommend future student to consider doing this often. As for the book, it is great. You do have to work hard to understand the material. But it is a great tool to helping you learn.
